### Program 2

Write a code in PL/SQL to create a trigger that checks for duplicate values in a specific column and raises an exception if found.

```
CREATE OR REPLACE TRIGGER prevent_duplicate_manager_id
BEFORE INSERT OR UPDATE ON employees
FOR EACH ROW
DECLARE pl_count
NUMBER; BEGIN
    SELECT COUNT(*)
    INTO pl_count
    FROM employees
    WHERE manager_id = :NEW.manager_id
    AND employee_id != :NEW.employee_id;
```

```

IF pl_count > 0 THEN
    RAISE_APPLICATION_ERROR(-20003, 'Duplicate manager_id found: ' ||
:NEW.manager_id); END
IF;
END;

```

```

INSERT INTO employees (employee_id, first_name, last_name, email, phone_number,
hire_date, job_id, salary, commission_pct, manager_id, department_id)
VALUES (202, 'Jane', 'Smith',
'john006@gmail.com',7383922241,'11/9/2000','ST_CLERK',10000,0.15,400,80);

```

The screenshot shows a SQL query being run in Oracle APEX. The query is:

```

1. INSERT INTO employees (employee_id, first_name, last_name, email, phone_number,
hire_date, job_id, salary, commission_pct, manager_id, department_id)
2. VALUES (202, 'Jane', 'Smith',
'john006@gmail.com',7383922241,'11/9/2000','ST_CLERK',10000,0.15,400,80);

```

An error message box is displayed, containing:

```

ORA-20003: Duplicate manager_id found: 400
ORA-06532: at "WKSP_SHIRIRAM154.PREVENT_DUPLICATE_MANAGER_ID", line 10
ORA-04088: error during execution of trigger
'WKSP_SHIRIRAM154.PREVENT_DUPLICATE_MANAGER_ID'

```

Below the error message, the results show a single row inserted successfully.

### Program 3

**Write a code in PL/SQL to create a trigger that restricts the insertion of new rows if the total of a column's values exceeds a certain threshold.**

```

CREATE OR REPLACE TRIGGER restrict_salary_insertion

FOR EACH ROW

    total_salary NUMBER;
    threshold NUMBER := 100000;
BEGIN

    SELECT SUM(salary)
    INTO total_salary
    FROM employees;
    IF (total_salary + :NEW.salary) > threshold THEN
        RAISE_APPLICATION_ERROR(-20004, 'Insertion denied: Total salary exceeds the
threshold of ' || threshold); END IF;
END;

```

```

INSERT INTO employees (employee_id, first_name, last_name, email, phone_number,
hire_date, job_id, salary, commission_pct, manager_id, department_id)

```

```
VALUES (203, 'Charlie', 'Brown', 'charlie203@gmail.com', '9122334455','03/01/2021', '#cb203', 5000, 0.20, 1000, 50);
```

The screenshot shows a SQL developer interface with a query editor and a results pane. The results pane displays an error message from Oracle:

```
ORA-20004: Insertion denied: Total salary exceeds the threshold of 100000

1. What privilege should a user be given to log on to the Oracle Server? Is this a system or an object privilege?

The privilege a user should be given to log on to the Oracle Server is the CREATE SESSION privilege.

Type of Privilege: This is a system privilege.

**GRANT CREATE SESSION TO username;**

2. What privilege should a user be given to create tables?

the user needs the CREATE TABLE privilege.

The CREATE TABLE privilege allows the user to create new tables in their own schema.

**GRANT CREATE TABLE TO username;**

3. If you create a table, who can pass along privileges to other users on your table?

When you create a table, only you as the table owner (or a user with the ADMIN OPTION or GRANT ANY PRIVILEGE system privilege) can grant privileges on your table to other users.

**GRANT SELECT ON your\_table TO other\_user;**

4. You are the DBA. You are creating many users who require the same system privileges. What should you use to make your job easier?

As a DBA, to simplify the process of granting the same system privileges to multiple users, you should use roles.

**GRANT CREATE TABLE TO my\_role;**

**GRANT my\_role TO user1;**  
**GRANT my\_role TO user2;**
